

SD Card Processing App Instructions

If you've already installed the app and just need to run it, skip to Step 5. If the app has been updated and you need to reinstall it, then you can skip Step 1.

1. Open R Studio (Windows key/Start Menu > type "R Studio").
 - a. If you don't have R installed, you will need to download it.
 - b. First, [download R](#)

R-4.1.3 for Windows (32/64 bit)

[Download R 4.1.3 for Windows](#) (87 megabytes, 32/64 bit)
[Download R 4.1.3 for Windows](#) (87 megabytes, 32/64 bit)
[Download R 4.1.3 for Windows](#) (87 megabytes, 32/64 bit)
[Download R 4.1.3 for Windows](#) (87 megabytes, 32/64 bit)

If you want to double-check that the package you have downloaded matches the package distributed by CRAN, you can compare the [md5sum](#) of server. You will need a version of md5sum for windows: both [graphical](#) and [command line versions](#) are available.

Frequently asked questions

- [Does R run under my version of Windows?](#)
- [How do I update packages in my previous version of R?](#)
- [Should I run 32-bit or 64-bit R?](#)

Please see the [R FAQ](#) for general information about R and the [R Windows FAQ](#) for Windows-specific information.

Other builds

- Patches to this release are incorporated in the [r-patched snapshot build](#).
- A build of the development version (which will eventually become the next major release of R) is available in the [r-devel snapshot build](#).
- [Previous releases](#)

Note to webmasters: A stable link which will redirect to the current Windows binary release is [<CRAN MIRROR>/bin/windows/base/release.html](#).

Last change: 2022-03-10

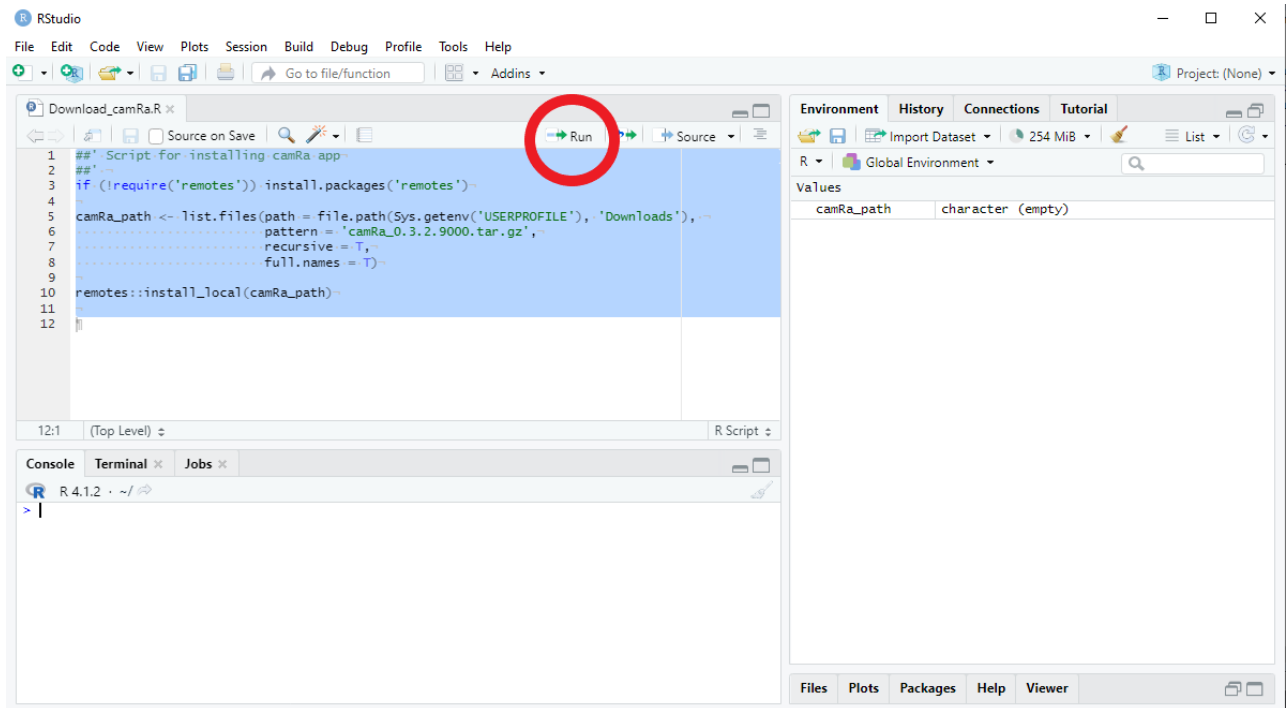

- c. Then, [download R Studio](#)

- d. Then, open it as above (Windows key/Start Menu > type "r studio").

SD Card Processing App Instructions

- Download the app (**camRa_0.4.0.tar.gz**) and the script for installing the app (**Download_camRa.R**) [from this folder](#). (Or, if you've been emailed an updated version, then download the tar.gz file from your email, or wherever you've been told to access it. The app file might have some different numbers, but it will start with **camRa_** and end with **tar.gz**. **Leave the tar.gz file in your Downloads folder**. The Download_camRa.R script will look for that file in your Downloads, and won't be able to find it otherwise.)
- Download [this script](#), and open it in R Studio.
- Run the script to download the app. You have to run two different chunks; the script has instructions for which to run. Highlight each set of lines, then **ctrl-Enter/Return** or click the **Run** button in R Studio. (**Note:** your R Studio might have a different layout than mine).

- If it gives you this message:

```
> remotes::install_local(camRa_path)
These packages have more recent versions available.
It is recommended to update all of them.
Which would you like to update?
```

```
1: All
2: CRAN packages only
3: None
4: tibble (3.1.6 -> 3.1.7) [CRAN]
5: nloptr (2.0.0 -> 2.0.1) [CRAN]
6: quantreg (5.88 -> 5.93 ) [CRAN]
```

```
Enter one or more numbers, or an empty line to skip updates: |
```

Type "1" and hit enter. This is updating the underlying software that R relies on. It may have popups asking if you want to update; click "Yes."

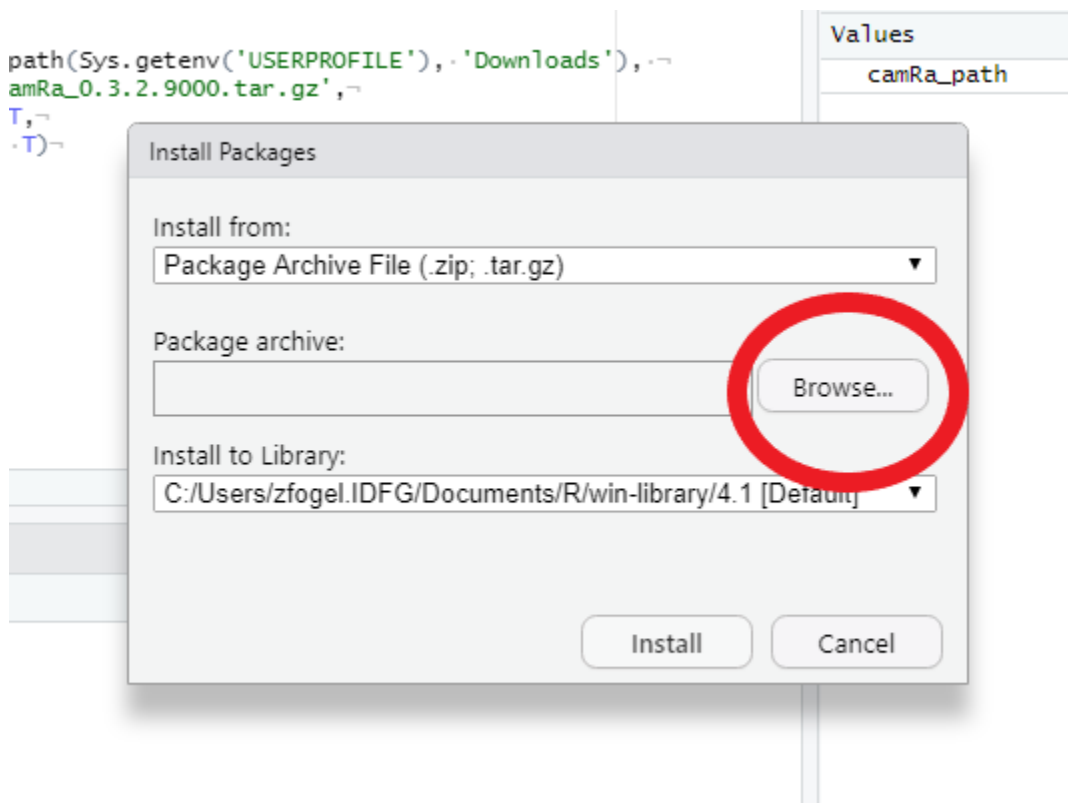

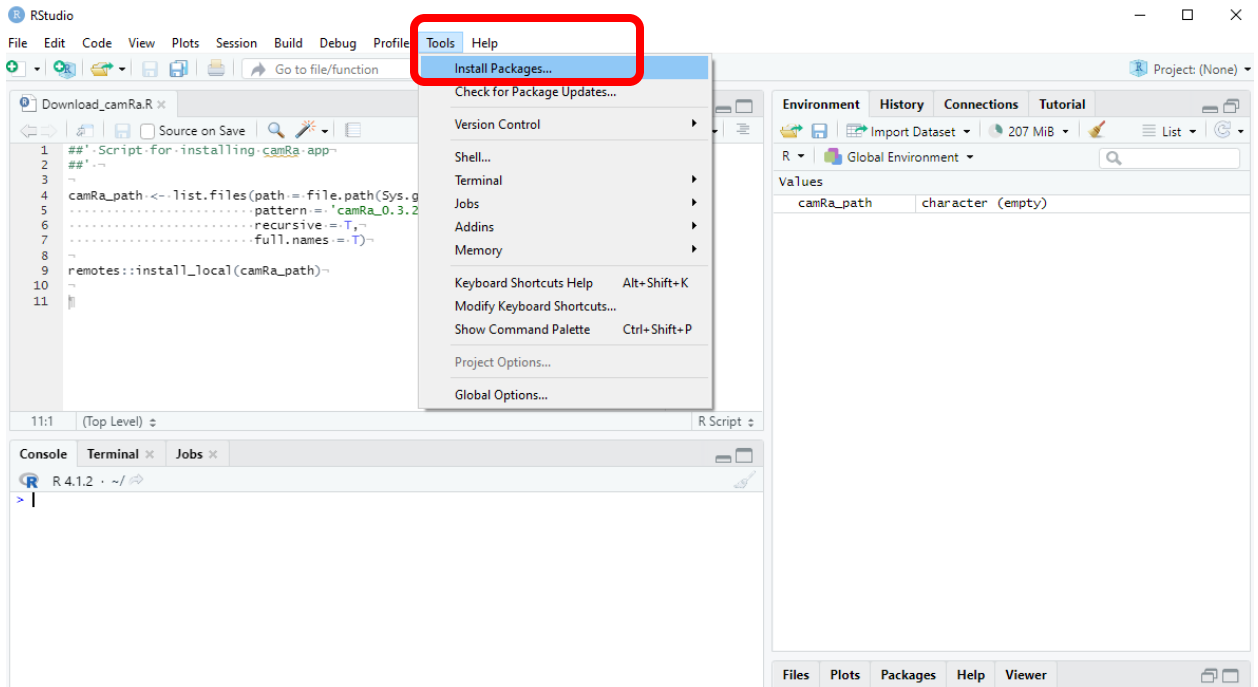

- If you are an existing R user, you may run into issues where you have different versions of the required dependencies. In that case, you can type `update.packages(ask = F)` to

SD Card Processing App Instructions

update all the packages you have installed on your computer. Hopefully the above step will take care of that though.

SD Card Processing App Instructions

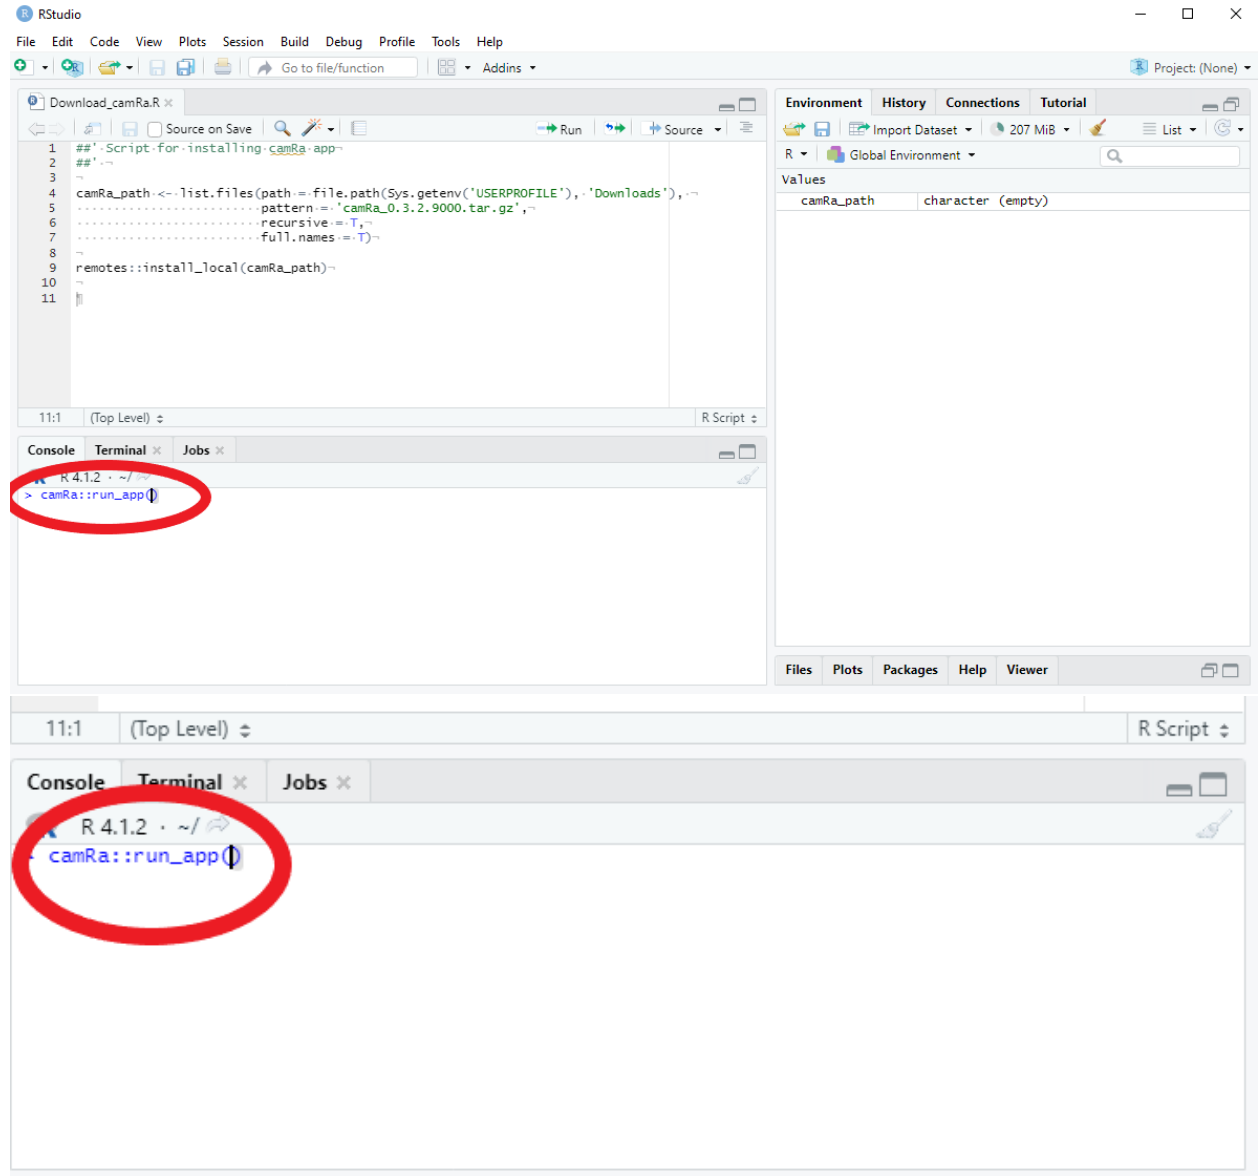

- c. If this doesn't work, then you can install the package manually. **Tools > Install Packages > Browse**, then select "camRa_*.tar.gz" from your Downloads folder. You will likely need to download some dependent packages, so [contact Sarah Thompson or Zach Fogel](#) for help.

SD Card Processing App Instructions

- Once you've successfully installed the package, then it's time to run the app! In the console, type `camRa::run_app()` and the app should open. You will need to run this command every time you need to reopen the app, but you do not need to reinstall it each time.

If you continue to have questions, [contact Sarah Thompson or Zach Fogel](#). They may tell you to use the alternate method, which is detailed on the next page.

SD Card Processing App Instructions

Appendix I

Use these instructions if you have tried and failed to download the app using the prior instructions, and you've been instructed to install it this way.

1. Download SDAp.zip from [this folder](#) (same as where you downloaded the tar.gz file). You can move it out of your downloads folder if you want.
2. Unzip it (right-click > Extract All)
3. Open R Studio, and open the SDAp project: File > Open Project > SDAp
4. Open SDAp > dev > 02_dev.R. Run the first chunk that isn't commented out (i.e. doesn't start with "####"). Those lines are:

```
dependencies <- c("shiny", "shinyBS",  
  "shinydashboard", "shinycssloaders", "shinyjs", "readr",  
  "exifr", "DT", "stringr", "dplyr", "shinywidgets", "utils",  
  "tools", "lifecycle", "stats", "xml2", "base64enc",  
  "htmlwidgets", "v8", "htmltools", "tippy", "slickR",  
  "plotly", "ggpubr", "rlang", "roxygen2", "beepr", "plyr")  
for (i in 1:length(dependencies)){  
  usethis::use_package(dependencies[i])  
}
```

It should be lines 18-25.

5. Open SDAp > dev > run_dev.R. In run_dev, select all (ctrl-A) and run (ctrl-enter or the "Run" button).
6. You will need to open the SDAp project out of the SDAp folder and run run_dev (steps 3 and 5) each time you want to run the app, but you only need to run step 4 the first time.
7. If you've been instructed to redownload the app, delete the existing SDAp folder and do steps 1-5 again.

Troubleshooting:

- Did you open the SDAp project? You'll know you did if the top left corner of R Studio says "SDAp – main – RStudio," and not just "RStudio"
- If this is your first time, did you run Step 4, with the dependencies lines?
- Are you running all of run_dev?
